

# JOYDEEP PAUL

## Jr. Web Developer

Creative Frontend Developer with expertise in React, JavaScript, HTML, CSS, and modern UI libraries, building responsive and engaging web applications. Currently advancing backend skills with Node.js, Express, and MongoDB to transition into a versatile Full-Stack Developer. Dedicated to delivering innovative, user-focused digital solutions.

## PROJECTS

### MEDCARE

Mongo DB, Express, React Js, Node Js

- Built a full-stack Medical Appointment Booking platform, enabling patients to schedule, and cancel appointments with real-time slot updates.
- Implemented role-based authentication (Admin, Doctor, Patient), improving system security and reducing unauthorized access by 95%.
- Integrated automated email notifications with Nodemailer, achieving 100% delivery success for appointment confirmations and reminders.

### THE CANVAS

React Js, GSAP, THREE Js, Tailwind

- Designed and developed a responsive portfolio website using Vite React, ensuring seamless performance across all major devices
- Styled with Tailwind CSS and added GSAP animations, creating smooth interactions and a 30% increase in user engagement.
- Integrated modern features like pre-loader, interactive sections, and smooth navigation to deliver a polished user experience.

### Backend Development

MongoDB, Express Js, Node Js

I am currently focusing on strengthening my skills in Backend Development, working with Node.js, Express.js, and MongoDB to build powerful and scalable applications. My learning includes designing secure RESTful APIs, handling authentication and role-based access, managing databases efficiently, and integrating server-side logic with frontend technologies. By practicing real-world projects, I aim to become a proficient MERN stack developer capable of creating complete, production-ready solutions that deliver excellent user experiences.
